## Overview

---

Compressed air energy storage (CAES) can be used as long-duration storage for renewable energy-based grids. CAES systems use electrical energy to drive a compressor, and the stored compressed air can later be used to drive a turbine when electricity is needed. [1] The first utility-scale CAES project was in the Huntorf power plant in Elsfleth, Germany . CAES startups create energy storages using compressed air. Hydrostor is a creator of Advanced Compressed Air Energy Storage (A-CAES) - long-duration, emission-free, economical energy storage.

Compressed-air-energy storage (CAES) is a way to store energy for later use using compressed air. At a utility scale, energy generated during periods of low demand can be released during peak load periods. The first utility-scale CAES project was in the Huntorf power plant in Elsfleth, Germany, and is still operational as of 2024 . The Huntorf plant was initially developed as a loa
