

China's solar power base station

Overview

China is on a bold mission to revolutionize renewable energy through its Space-Based Solar Power (SBSP) initiative. The plan involves constructing a colossal 1-kilometer-wide solar power station in geostationary orbit, approximately 36,000 kilometers above Earth. The "Sun Chaser Project" space solar power station, built by a team led by Academician Duan Baoyan of Xidian University, has just completed its second phase of testing. This system harvests solar energy from a geosynchronous orbit 36,000 kilometers above Earth and beams it back to Earth using .

XINING, June 9 -- Amid China's green energy revolution, the world's largest solar photovoltaic power plant on the Qinghai-Xizang Plateau is forging a unique development path, simultaneously generating electricity while making exemplary contributions to poverty alleviation and ecological . Deep in the Kubuqi desert in north China's Inner Mongolia Autonomous Region, rows of blue solar panels glisten under the winter sun, converting sunlight into electricity that flows into thousands of households. [Photo/Xinhua] Construction of the second phase of China's largest renewable energy power base in the country's Gobi Desert and other arid regions will further facilitate the country's shift from . That vision is now one step closer to reality as China pushes forward with its ambitious space-based solar power project.
