

Communication base station power supply site communication

Overview

This article clarifies what communication batteries truly mean in the context of telecom base stations, why these applications have unique requirements, and which battery technologies are suitable for reliable operations. Many remote areas lack access to traditional power grids, yet base stations require 24/7 uninterrupted power supply to maintain stable communication services. For base stations located in deserts or other extreme environments, independent power supply is essential, as these areas are not only . In today's increasingly dense communication network coverage, the stability of base station power supply systems directly impacts signal transmission quality. Power factor corrected (PFC) AC/DC power supplies with load sharing and redundancy (N+1) at the front-end feed dense, high efficiency DC/DC modules and point-of-load converters on the back-end. 45V output meets RRU equipment .
