Solar Technology Has Ancient Roots but Modern Applications: While humans have harnessed solar energy since the 7th century BCE using burning mirrors and passive solar architecture, the scientific foundation for modern photovoltaics wasn't established until 1839 with Becquerel's . The most ubiquitous and renewable source of energy is, of course, the sun. People have long used solar energy - and not just for growing crops. According to Let It Shine: The 6,000-Year Story of Solar Energy by John Perlin, excavations of Neolithic Chinese villages show that the villagers built . Solar energy, the radiant light, and heat from the sun, has been harnessed by humans since ancient times using a range of ever-evolving technologies. From the simple magnifying glasses used in the 7th century B. These early practices laid the groundwork for future advancements in solar technology. The sundial does not actually use solar energy as a source of energy, rather it represents a historic milestone as it harnessed sunlight for the first time to operate an apparatus for measuring time.
