

Do photovoltaic panels use PoE

Overview

Polyolefin Elastomer (POE) film has become a vital component in solar energy technology, especially for encapsulating solar cells. While EVA, POE, and silicone each have their own advantages, many companies still choose EVA due to its strong adhesion and high light transmission. In 2024, EVA accounted for over 65% of the market. Overall, encapsulation is essential for ensuring that solar panels last longer and operate more . POE/EPE is specifically recommended for TOPCon, back contact solar panels, two-sided modules, and other advanced technologies. Your choice of encapsulant directly affects how well your solar panels work for the next 25+ years. But today's . In photovoltaic module manufacturing, the choice of encapsulation materials plays a vital role in determining module performance, lifespan, and reliability.
