

# Electric Energy Storage Fire Extinguishing System

## Overview

---

In an ESS container, fires can destroy costly PCS and Li-ion batteries, and with them, your revenue and brand. Lost revenues from a year's downtime can average approximately \$250,000, and the potential rebuild costs can amount to over \$2.5 million for the largest containers. Battery Energy Storage Systems (BESS) play a crucial role in integrating renewable energy sources like solar and wind by storing excess power and delivering it when needed. But with this game-changing technology comes a significant challenge—fire safety. Fires in battery storage systems can . Decomposition of SEI Layer: At relatively lower temperatures (around 80-120°C for many Li-ion chemistries), the Solid Electrolyte Interphase (SEI) layer, which is crucial for cell stability, starts to decompose exothermically. FirePro technology has successfully proven its efficiency and effectiveness in suppressing Li-Ion battery fires in more than 100 tests carried out over the past 7 years by accredited laboratories and prominent Li-Ion battery manufacturers. It collects data from detectors, activates fire extinguishers, controls audible . Our company uses our own technical advantages and scientific research results, combined with the status quo of battery energy storage, independently developed a set of features with high fire extinguishing efficiency, storage at room temperature and pressure, temperature induction self-starting . Gas Fire Suppression Systems (e. It is effective, non-conductive, and causes .
