BESS from selection to commissioning: best practices<sup>38</sup>. Energy storage station construction and factory operation construction and installation, commissioning, and operation & maintenance. As cited in the DOE OE ES Program Plan, "Industry requires specifications of standards for characterizing the performance of energy storage under grid conditions and for modeling behavior. Discussions with industry professionals indicate a significant need for standards. The guide is divided into three main . address the intermittency from IGS. ESS's unique ability to store energy produced at a particular time for later use can help the system respond to power fluctuations when required. Working on a battery should always be considered energized .
