

# Farmers install solar panels on rooftops

## Overview

---

With roof mounts, you can install solar panels on any building on your farm, provided it can support the additional weight and receives sufficient sunlight. Whether it's the roof of a poultry house or a barn housing your equipment and materials, you can put a previously . **Barn Solar Outperforms Residential:** Agricultural solar installations cost 15-25% less per watt than residential systems due to simpler roof configurations, larger system sizes, and easier installation access. Most barn systems achieve payback periods of 6-10 years compared to 8-12 years for . South-facing orientation maximizes sunlight exposure for farm solar panels, increasing energy production by up to 30% compared to other directions. Ground-mounted systems offer easier maintenance and optimal positioning for farms, while roof installations save valuable land space for agricultural . Farmers and rural property owners are increasingly turning to solar panels for barn roofs to reduce energy costs, improve grid resilience, and support sustainable farming practices. 50 per watt and reducing farm electricity expenses by 50-75%. A typical 100kW agricultural solar system costs \$250,000-\$350,000 before incentives, with farms achieving 6-10 year payback periods through . NREL researcher Jordan Macknick works with teams from University of Massachusetts (UMass) Clean Energy Extension and Hyperion on a photovoltaic dual-use research project at the UMass Crop Animal Research and Education Center in South Deerfield, MA.
