

Forklift solar container lithium battery pack maintenance

Overview

Key practices include maintaining 20-80% charge levels, avoiding extreme temperatures (0°C to 45°C operational range), and using manufacturer-approved chargers. Monthly full discharge cycles, post-shift charging, and regular connector inspections are critical. Lithium forklift batteries are like the heart of lift trucks, giving them the energy they need to work well. Proper maintenance extends battery lifespan, reduces downtime, and enhances energy efficiency.
