

Four types of uninterruptible power supply work

Overview

It also outlines different types of UPS systems-standby, line-interactive, and continuous-and compares them in terms of functionality, cost, and application, while highlighting alternative solutions like motor-generator sets. An Uninterruptible Power Supply (UPS) is a device designed to provide backup power when the primary power source fails or when voltage levels drop below acceptable limits. Energy Storage: UPS systems use batteries, flywheels, or supercapacitors to store energy for use during power interruptions.
