

# Generator has oil wind

## Overview

---

The short answer is yes, wind turbines use oil but it's not what you think. Wind turbines are purely mechanical devices with lots of moving parts, so oil must be used to lubricate the gears in order to keep them running smoothly and reduce wear and tear. Proper maintenance crucial for productivity and environmental sustainability. Oil Consumption in Wind Turbines Wind turbines require a significant amount of oil for proper operation, with an average turbine consuming up to 2000 gallons of . Versions of wind turbine-generated power helped early Egyptians propel cargo vessels along the Nile River. Wind turbines, towering symbols of clean energy, might seem entirely disconnected from .
