

# High temperature solar power generation for home use

## Overview

---

Monocrystalline solar panels are often considered the best option for hot climates due to their superior temperature coefficient and efficiency. Rising temperatures can reduce solar panel efficiency by 0.30%/°C or better (like SunPower Maxeon 3 at -0.30%/°C). These systems utilize mirrors or lenses to focus sunlight onto a small area, creating high temperatures necessary to produce steam and drive turbines. As global temperatures rise and the demand for renewable energy sources intensifies, the performance of solar panels in high-temperature environments has become a critical consideration. First, a description of HTST technology is provided, and the commercialisation of HTST technology is examined. HTST . The concentrating solar-thermal power (CSP) subprogram within the U. S. Department of Energy (DOE) Solar Energy Technologies Office supports early-stage research and development to de-risk and lower the cost of CSP technologies that can provide solar power on demand. Projects in the CSP portfolio .
