

# **Inverter operates at full power for a long time**

## Overview

---

Technically: It can be operated continuously. Qualified inverters all possess: Overload protection, Over-temperature protection, Undervoltage/Overvoltage protection. Under good ventilation and normal load conditions, prolonged operation is permissible. These scenarios inherently operate 24 hours a . In solar energy systems, the inverter is the key component that converts direct current (DC) generated by solar panels into alternating current (AC) that can be used by the grid or devices. While the solar panels themselves do not generate power .
