

# Iraq energy storage for grid stability

## Overview

---

This article compares Iraq's latest renewable energy policies with regional peers, forecasts C&I energy storage trends through 2030, and highlights industry-specific case studies, leveraging recent data to guide stakeholders in navigating this emerging market. As of September 2025, Iraq stands at a critical juncture in its energy transition, seeking to harness its vast renewable energy potential to address chronic power shortages and reduce reliance on fossil fuels, which dominate over 98% of its energy mix. With ambitious targets to deploy 12GW of solar energy storage to energy system stakeholders. (Technology Development, Manufacturing and Supply Chain, Technology Transitions, Policy and Economics and Exclusion. With daily sunshine averaging 8-10 hours [1] [9], Iraq's pivot to renewables isn't just smart—it's survival. The LCOS of solar energy storage is competitive with fossil fuels. Content from this work may be used under the terms of the Creative Commons Attribution 3.0 license. For regions with insufficient solar resources, energy storage is essential. For companies exploring solar, wind, or energy storage opportunities in Iraq, understanding the current grid conditions, energy demand, and investment economics is essential.
