

Is it good to have photovoltaic panels all over the farmland

Overview

Locating solar energy on farmland could significantly increase the available land for solar development, while maintaining land in agricultural production and expanding economic opportunities for farmers, rural communities, and the solar industry. The practice of agrivoltaic farming is booming in the U. and even in cold and cloudy Canada. Such agrivoltaic . Farmers can benefit from solar energy in several ways-by leasing farmland for solar; installing a solar system on a house, barn, or other building; or through agrivoltaics. Critics argue that climate protection and efficient food production are mutually exclusive. But is that really the case?

In reality, climate change itself poses the . Across the country, solar farms have experienced rapid growth, supported by advancements in technology, cost reductions, and policy initiatives such as state-level renewable portfolio standards and tax credits. This is Part 3 in a five-part multimedia feature examining Cornell's cutting-edge, interdisciplinary contributions to solar energy research as New York state works . As the world looks for ways to produce more with less, agrivoltaics offers a fresh approach: combining solar panels and agriculture on the same land.

Why Farmers Are Shielding Their Crops With Solar Panels

Partial shading farms with solar panels increases crop production all over the world. This means more low-cost green energy, more food, and more agriculture jobs.

Are Solar Farms Really Displacing Agricultural Land?

In debates about renewable energy, it is often claimed that installing solar panels on farmland renders it unusable for agriculture - taking away precious space needed for food production.
