

Is it okay to shape the sloped roof of photovoltaic panels

Overview

The 30-degree rule is flexible: While 30 degrees is often cited as optimal, any roof pitch between 15-45 degrees will deliver excellent solar performance, typically within 5-10% of peak efficiency. Don't let imperfect pitch discourage you from going solar. Latitude-based calculations provide better . Roof slope (or pitch) refers to the angle or steepness of your roof, usually measured as a ratio (e. , 4:12, meaning 4 inches of rise for every 12 inches of run). The slope directly affects how solar panels face the sun and how efficiently they convert sunlight into electricity.
