

Latest on the theft of Qin photovoltaic panels

Overview

energy officials are reviewing security risks posed by Chinese-made components in renewable energy systems after discovering hidden communication devices in some units, according to a report by Reuters. That's what happened in China, anyway, just five days after authorities took opened up what they claim is the world's first solar panel-paved highway. As reported by the Qilu Evening News (and noted by TechNode), the experimental kilometer-long stretch of road in Shandong is covered in more than . U. The report revealed that undocumented components were found in several solar inverters and . US releases a third of electronics detained under China forced labour law, data shows US customs officials have released more than a third of the electronic equipment, including solar panels, detained since last year under a new law meant to weed out products made with forced labour, according to . Chinese solar panels have been found to contain 'malicious code' that can cause blackouts, raising alarms about the risks to energy infrastructure. These hidden devices raise concerns that China could remotely manipulate power supplies, potentially destabilizing grids and causing widespread blackouts across the US, UK, and .
