

Lithium-ion energy storage battery life in Pakistan

12.8V 200Ah

Overview

Pakistan imported an estimated 1.25 gigawatt-hours (GWh) of lithium-ion battery packs in 2024 and another 400 megawatt-hours (MWh) in the first two months of 2025, according to a research report by the Institute of Energy Economics and Financial Analysis (IEEFA). This is driven by high electricity costs and declining solar component prices. Consumers are combining solar with Battery Energy Storage Systems (BESS) to reduce grid dependence, lower energy bills, and improve reliability. This is due to an increase from surcharges and duties on lithium-ion batteries. The payback period ranges from 2 to 4 years. The Pakistan Lithium-Ion Battery Market Report is segmented by Product Type (LCO, LFP, NMC, NCA, LMO, and LTO), Form Factor (Cylindrical, Prismatic, and Pouch), Power Capacity (Up To 3,000 MAh, 3,000 To 10,000 MAh, 10,000 To 60,000 MAh, and Above 60,000 MAh), and End-Use Industry (Automotive, Industrial, and Residential). These imports are expected to rise to 8.5 GWh in 2025. Lithium-ion batteries, mostly made in China, are electrifying homes and powering commercial buildings. Islamabad, June 5, 2025: Battery storage imports in Pakistan are rising sharply and are anticipated to reach 8.5 GWh in 2025.

Lithium-ion energy storage battery life in Pakistan

INFRASTRUCTURE: PAKISTAN'S LITHIUM REVOLUTION

According to global trade data platform Volza, Pakistan imported almost 70 percent of its lithium-ion batteries from China between April 2024 to March 2025, with the rest coming from the US
