

Madagascar energy storage investment

Overview

Global South Utilities (GSU) has secured agreements with Madagascar to develop a 50 MW solar plant and a 25 MWh battery energy storage system (BESS) in the island nation. The ESOGIP will aid Madagascar's government to decrease energy loss, increase energy efficiency, raise the ratio of renewables in the domestic energy mix, develop its governance of the . The World Bank approved today a total of \$400 million to improve the connectivity, resilience and management of . This acquisition marks the first exit of early-stage investors from an operational mini-grid platform in Madagascar, demonstrating the growing bankability of the mini-grid asset class and developers. Structured as a project finance acquisition while retaining ANKA as a long-term minority . Madagascar is endowed with significant renewable energy resources and yet has one of the largest energy access deficits in the world. Only 36% of the population has access to electricity. For those who do, the service is often unreliable. Let's unpack why this 50-year-old technology is suddenly . Against the backdrop of Africa's relatively underdeveloped electricity infrastructure and unstable power grids, Madagascar is accelerating its transition towards a model of 'distributed energy + energy storage systems'.
