

Oversupply of photovoltaic panels

Oversupply of photovoltaic panels

[China's solar panel industry is shrinking: Impact of overcapacity](#)

Manufacturing capacity in China is 500 GW per year, exceeding the global demand of 270 GW in 2024. This oversupply has intensified competition among producers, leading to a sharp

[Global Solar Panel Prices Hit Record Lows Due to Massive Oversupply](#)

Global solar module prices have collapsed to a record low due to a massive global manufacturing oversupply, immediately accelerating the economic case for new solar projects

[Non-stop solar innovation despite module oversupply - pv magazine](#)

Alex Barrows and Molly Morgan of CRU Group explore how the market reached the imbalance that caused PV prices to crash, what this has meant for innovation, and how it might affect

China's Photovoltaic Industry Faces Extensive Oversupply

Within just half a year, however, the entire Chinese photovoltaic industry has fallen into a loss territory. As of July 9, among the listed companies that have disclosed their mid-year performance forecasts,

'Oversupply is still there' - pv magazine International

There are very few signs that panel prices may increase before the end of the Chinese New Year holiday. On the other hand, oversupply is still there."

[China tackles module oversupply, creating optimism ahead of 2026](#)

One of the most impactful trends has been the culmination of years of leading Chinese module manufacturers producing more modules than developers can install, causing module prices

Snapshot 2024

After several years of tension on material and transport costs, module prices plummeted in a massively over-supplied market, maintaining the competitiveness of PV even as electricity prices decreased after

[World stuck in major solar panel 'supply glut': module prices plummet](#)

The world's solar manufacturing capacity is set to remain at more than double annual installations in the coming years, with the dynamics of oversupply continuing to depress panel prices, according to the

[China Has so Many Solar Panels, Its Grid Can't Handle All the Power](#)

China has produced an excess of solar panels, causing overcapacity issues domestically and abroad. The US, the European Union, and China are facing challenges because of the glut of

[China's Solar Sector Seen Facing Years of Oversupply, Low Prices](#)

China accounts for 80% of solar module production capacity after years of subsidies, driving oversupply that has triggered a collapse in global prices and provoked import duties from
