

Photovoltaic panel purlin reinforcement process

Overview

The addition of solar panels increases the permanent roof load, which can cause excessive deformation in simply supported purlins, often exceeding code limits. To address this, we propose using a down-stayed purlin structure for reinforcement, enhancing stiffness and load-bearing . Previously, ZHM shared methods for reinforcing main structures like steel columns and main beams after adding photovoltaics to the roof. Today, we will share several methods for reinforcing purlins. Common Reinforcement Methods and Comparison of Advantages and Disadvantages Reinforcement of steel . Optimizing purlins can improve energy output by up to 32%, reduce installation time, and lower structural costs. It's like buying a Ferrari but using bicycle tires. Typically the purlin roof has in fact more than one static system.
