Overview

The short answer is yes: You can absolutely use solar panels without battery storage. In fact, the majority of residential solar installations in the U. are "grid-tied" systems without batteries (although solar + battery systems are becoming more and more common). Protective relays monitor voltage, current, or frequency and respond to abnormal conditions by opening or closing a switch to isolate parts of a circuit. Based on their switching mechanism, relays can be divided into two categories: electromechanical and static.
