

Power generation wind power

Overview

Wind turbines use blades to collect the wind's kinetic energy. Wind flows over the blades creating lift (similar to the effect on airplane wings), which causes the blades to turn. Historically, wind power was used by sails, windmills and windpumps, but today it is mostly used to generate electricity. Associate Professor of Engineering Systems and Atmospheric Chemistry, Engineering Systems Division and Department of Earth, Atmospheric and Planetary Sciences, Massachusetts Institute of Technology. Dramatic Cost Competitiveness: Wind energy has achieved remarkable cost reductions, with new wind projects now pricing electricity at around \$26 per megawatt-hour, making it competitive with natural gas at \$28 per MWh and establishing wind as one of the most economical electricity sources available . Annual electricity generation from wind is measured in terawatt-hours (TWh) per year.
