

Ranking of wind power generation in the first year

Overview

Official statistics by year of wind power generation (TWh). The values are presented in tables and charts with calculations of changes and shares, and with extensive analytical functionality. According to preliminary statistics released by the World Wind Energy Association (WWEA), the world added 169'014 Megawatts (MW) of new wind capacity - a 35% increase over 2024 - bringing total global installations to . China is the largest producer of wind power in the world, having generated 466. 4 TWh produced during the year. 40 TWh of wind . The worldwide total cumulative installed electricity generation capacity from wind power has increased rapidly since the start of the third millennium, and as of the end of 2023, it amounts to over 1000 GW. Data source: Ember (2026); Energy Institute - Statistical Review of World Energy (2025) - Learn more about this data Measured in terawatt-hours. How did wind power grow in 2022?

In 2022 wind electricity .

[Global installed wind power capacity additions 2024, Statista](#)

With a market share of 70 percent in 2024, China lead the ranking of the largest wind power generating countries worldwide, ahead of the United States, Germany, and Brazil.

Best Universities in the World [EduRank 2026 Rankings]

Top 300 world universities ranked by EduRank based on research outputs, non-academic prominence, and alumni influence. The rankings are determined by analyzing 3.16B

Wind power by country

As of 2023, Europe had a total installed wind capacity of 255 gigawatts (GW). In 2017, a total of 15,680 MW of wind power was installed, representing 55% of all new power capacity, and the wind power generated 336 TWh of electricity, enough to supply 11.6% of the EU's electricity consumption. In Q4 2023, wind power exceeded coal in European electricity generation for the first

QS World University Rankings: Top global universities
