

# SUV equipped with solar generator for charging

## Overview

---

Described as the "world's first off-road solar SUV," the two-seater named Stella Terra can drive long distances powered entirely by the sun, and its aerodynamic design helps it reduce drag while the solar panels on its sloping roof charge its Li-ion battery. Toyota's new BZ4X, an all-electric SUV, will come with an optional steering yoke and solar roof. Since solar panels generate electricity only when the sun is shining, you still need to draw power from the utility at night, on . Imagine a car that can travel anywhere without the need for fuel or a charging station. Numerous solar-powered car prototypes are currently in development, with some already being produced. The prototype was unveiled in September . Another student team from the Eindhoven University of Technology has developed an electric car, shown here, that captures more carbon dioxide than it emits while driving.

## SUV equipped with solar generator for charging
