

Overview

The cost per single rack in the data center depends on a number of factors as follows: The barebones price of a normal server rack ranges from 1000 USD dollars to 5000 USD dollars depending on the material used to make it, its dimensions, as well as additional features that come with . The cost per single rack in the data center depends on a number of factors as follows: The barebones price of a normal server rack ranges from 1000 USD dollars to 5000 USD dollars depending on the material used to make it, its dimensions, as well as additional features that come with . Eaton's SmartRack® Modular Data Centers address this growing demand with IT rack, cooling and service enclosures that form a performance-optimized data center, or POD. This solution reduces deployment time, lowers cost and simplifies the process of launching a new data center. The SRP-2R-C12's dual IT rack enclosures each house up to 12 server racks. Note: Leasing is available to businesses only. For more information, read the Leasing FAQs. The growth of edge computing and distributed artificial intelligence (DAI) in enterprises, warehouses and manufacturing facilities has increased demand for small data centers with shorter deployment cycles, lower costs, optimized capacity and scalable configurations. These data centers also need to be highly efficient. Faced with these challenges, IT and data center managers increasingly want infrastructure strategies that are alternatives to conventional approaches. These new strategies must include solutions that:
• Improve energy efficiency, space utilization and IT productivity
• Offer measurable savings in total cost of ownership (TCO)
• Provide a data center server rack is critical for managing and organizing IT equipment. Choosing the right server rack involves understanding key dimensions, types, and features.
