

Solar photovoltaic panels used by the captain

Overview

In addition to the Solar Skin, each catamaran's bimini area, the zone where shade is provided to the captain of the ship, comes equipped with photovoltaic cells that have been honed for shaded environments, pulling in the sun's energy. French company Selar introduces the cruise ship Captain Arctic with foldable solar panel sails, allowing the ship to exploit and use both wind and solar energy. Selar's cruise ship named Captain Arctic has retractable sails covered with solar panels so the vessel can harness and use the energy coming from the wind and sun. This, combined with propeller shafts that act as hydro turbines, significantly reduces the ship's reliance on fossil fuels. The ship is also equipped with a dynamic positioning. In late November 2024, the UAE-based engineering company Goltens hosted a keel-laying ceremony for Captain Arctic, a polar expedition vessel ordered by French ship operator Selar. Selar is having the 70-metre yacht built in Mauritius with five wing masts, each 35 metres long, which will cover almost 2,000 square metres of solar cells.
