

Solar power generation public opinion event

Overview

A new analysis of social media posts unveils a significant shift in public sentiment towards solar energy from 2016 to 2022, showcasing a growing political divide and its implications for sustainable energy policy. Polling from Resource for the Future (RFF) reveals that the popularity of solar power among the U. population has dropped to 83%, down from 91% in 2013. The Conservative government wants the U. to hit 70GW of solar power generation by 2035 (quadruple what is generated right now.) Labour backs the aim, and reckons they can decarbonize the whole electricity system even more quickly by 2035 (quadruple what is . US voters who supported President Donald Trump in the last election overwhelmingly support greater use of solar power, according to a poll by former Trump adviser Kellyanne Conway first shared with Semafor. Smaller-scale installations - including solar panels on things like homes and public buildings - have also seen sharp growth.
