

Solar power is simply not enough

Solar power is simply not enough

Solar Power Alone Won't Solve Energy or Climate Needs

Recent reports that solar capacity will soon exceed nuclear capacity reveal an important fact. It also hides a crucial distinction needed to understand the context of energy production, and the

Factcheck: 16 misleading myths about solar

As countries are building solar power to replace electricity generated by burning fossil fuels, this is the comparison that matters when assessing the lifecycle emissions of solar power.

Why Wind and Solar Aren't Enough

So whereas we'd like to believe that building wind and solar farms will allow us to close dirty power plants, it's not so. Those old fossil-fueled plants have to be kept online to power the grid

eli5: Why do we not run heavily on solar energy as a society

Conventional power plants can simply increase the power output in a variety of ways on demand. Unfortunately, we lack the ability to summon the Sun on demand, so if a Solar power plant

[Debunking the Myth: Is Solar Power Really Inefficient and Unreliable?](#)

12 Myths About Solar Debunked [Busted in 2025]

The truth? Most of these fears are outdated or just plain wrong. Today, we're busting the 12 biggest myths about solar energy-so you can separate fact from fiction and decide if solar is right

Solar power is simply not enough

As wind and solar power have become dramatically cheaper, and their share of electricity generation grows, skeptics of these technologies are propagating several myths about renewable energy and

In the realm of renewable energy, solar power often encounters its fair share of skepticism. One prevailing myth is the belief that solar energy is inefficient and unreliable, incapable of meeting

Why renewables alone cannot meet our energy needs

Without base-load producers, there simply is not enough energy to sufficiently supply the grid at all times of day, no matter how many solar or wind facilities get tacked on.

Solar's Record Year-and Why It Still Isn't Enough

The result is a structural paradox: renewables are accelerating, but not fast enough to displace fossil fuels. Instead, they're merely supplementing growing demand-allowing carbon

Solar Energy Alone Can't Meet the Energy Demand

While solar energy offers numerous advantages, including being renewable, abundant, and relatively clean, there are several reasons why it may not be sufficient to meet the world's growing energy
