

Switzerland electricity regulations

Overview

In 2024, Swiss voters approved a new Electricity Act that promotes domestic and renewable energy. The law brings opportunities for companies, particularly in the area of photovoltaics. ElCom also monitors electricity prices and tariffs as well as the security of . When drafting the Federal Electricity Supply Act (Electricity Supply Act), the key national legislation on electricity, the Swiss Federal Council considered both EU Directive 2003/54 and 2003/55 (on the internal markets in electricity and gas respectively) and EU Regulation 1228/2003 1 on the . The electricity agreement is essential for the secure and efficient operation of the transmission grid and for Switzerland's supply of electricity. This means that cooperation with the EU enshrined in international law is necessary, especially as the Swiss electricity grid is integrated into the . The EU and Switzerland have agreed a comprehensive package of agreements as part of bilateral talks. Both sides have been negotiating such an electricity agreement . CONSIDERING the existing particularly close integration of the electricity systems of the Union and Switzerland and that Switzerland was part of the group of European countries which developed cross-border electricity trade in Europe on the basis of cooperation between transmission system . Households and smaller companies will be allowed to remain in the basic supply up to a consumption of 50 megawatt hours per year and workplace.
