## Overview

---

The most common cause of low power output in solar panels is obstructions or shadows on the array. Checking Voc (voltage open circuit) and Isc (current short circuit) measurements can help diagnose panel issues. Loose connectors and improperly seated terminals can cause low voltage or . Are your solar panels not working properly?

Is your inverter giving a warning light on its display?

There must be a technical issue with your system while producing and delivering the desired amount of power. For that reason, it's most likely that a problem is caused by a defect in system components other than . SolarEdge Inverter malfunctioning AC and DC voltage is present, but no power is being produced Waking up to discover your solar panels aren't producing power can be frustrating and alarming. Click the 'Troubleshoot' button in that section to start the process.
