

The strongest organization in the EU to study microgrids

Overview

The Consortium comprises major European manufacturers, power utilities and potential Microgrid operators and research teams with complementary, high quality expertise. improved energy efficiency, minimisation of overall energy consumption, reduced environmental impact, improvement of reliability and resilience, network operational benefits and more cost efficient electricity . European organizations deploying distributed energy resources (DERs) and microgrids face a stark reality: 67% of pilot projects fail to scale beyond initial deployment phases, according to the European Commission's 2024 Clean Energy Industrial Forum report. The primary culprit is not technology . Energy grids are central to strengthening the EU's energy infrastructure. Energy must flow efficiently across EU countries to accelerate electrification and help lower energy prices and support affordable living for all Europeans. ' [1] The three . Under the EU FP6 research project 'More Microgrids', a general European platform of database and expert know-how for planning and evaluation of Microgrids has been established. This possibility could stimulate a more sustainable energy mix.

The strongest organization in the EU to study microgrids

Microgrids-Research

In the EU, various Member States have implemented microgrids to test the system, but there is no complete overview of how many microgrids exist nor how many are currently being developed. This

Mapping Europe's Microgrids to Ensure Effective Regulation

The initiative, undertaken as an offshoot of her research into the regulation of microgrids from the legal and economic perspectives, is aimed to provide as complete as possible overview of

[Europe Microgrid Market: Current Analysis and Forecast \(2024-2032\)](#)

Government support for microgrids has been gaining momentum in Europe, driven by factors such as the need for reliable and resilient energy infrastructure, the transition towards cleaner energy

[Case study: Distributed energy resources & microgrids - a leading](#)

Microgrids

European roadmap for microgrids

Under the EU FP6 research project 'More Microgrids', a general European platform of database and expert know-how for planning and evaluation of Microgrids has been established.

The Consortium comprises major European manufacturers, power utilities and potential Microgrid operators and research teams with complementary, high quality expertise.

NEWS & EVENTS

To obtain an overview of existing initiatives, PhD researcher Jamie Behrendt of the University of Groningen has created a unique website that provides a map of existing and developing

[Microgrids and National Regulatory Authorities in the EU: An Empirical](#)

This article explores the narrative of NRAs in facilitating the development of microgrids as part of the transition towards a more sustainable energy mix. An exploratory multi-method study is

European grids

In October 2025, the Commission published a study on network development planning, tariff structures and connection requests for electricity distribution grids that explores best practices

Microgrids and EU law: Three Microgrid models to solve one

As a result, this paper presents a diversified approach to the regulation of microgrids, focusing on the regulatory puzzle of integrating the microgrid models in the EU legal framework, as
