## Overview

---

Operators can deploy solar, wind, and other renewable sources to power base stations, providing a sustainable energy supply. This reduces operating costs and greenhouse gas emissions. The number of 5G base stations (BSs) has soared in recent years due to the exponential growth in demand for high data rate mobile communication traffic from various intelligent terminals. By exploring the . Energy storage systems can utilize renewable energy sources such as solar power for charging and release stored energy during peak demand periods, improving energy efficiency. Faced with climate change and strained resources, network operators must adopt measures to reduce energy . Various approaches have been proposed to reduce the energy consumption of an RBS, for instance, passive cooling techniques, energy-efficient backhaul solutions, and distributed base station design by using a remote radio head (RRH).
