

# Wind turbine blades 44 meters long

## Overview

---

Currently, the longest wind turbine blades in the world exceed 150 meters. Offshore wind turbine blades, however, generally reach 66 . A modern onshore turbine now swings fiberglass blades averaging 70-85 m, while the latest offshore prototypes stretch past 115 m. We'll examine common lengths found on modern turbines. This means that their total rotor diameter is longer than a football field. Modern blades are made from carbon-fiber and can withstand more stress due to higher .
